

## **Cleaning instructions for isotope premises**

- Laboratory manipulations must be stopped for the duration of the cleaning operation.
- The laboratory must be tidy.
- Radioactive waste must be stored or properly shielded.
- Cleaning staff will be warned not to touch any waste in the room.
- Contaminated products and equipment must be properly labeled and stored.
- The laboratory can only be cleaned after a contamination check carried out by a member of the department.
- Cleaning equipment will be checked by a member of the department before being used elsewhere; if it is found to be contaminated, it will be treated as radioactive waste.
